A MOMENT IN HISTORY

When the railroad lumber market in Michigan began to decline by 1916, founder Laurin Lewis Johnson turned next to the business of supplying the fine hardwood used by the automobile industry for car and truck bodies, including the material for spoke wooden wheels. ABOVE: Two Lumberjacks with a 'muscle-powered' crosscut saw. Circa 1924.

CEDAR (AROMATIC) PLYWOOD has a pleasing, fresh cedar scent that can repel moths and other insects. Commonly used to provide a rich country style wooden lining in closets, pantries, and other small places.

FACT OR FICTION?

Q: Do we sell quality products?

My local wood supply store had three boards of cypress that were terrible. They tried to tell me that they were the best available due to drastic shortages. However the material I received from you was almost flawless...

I have not seen such quality lumber anywhere. I will use you for all future needs where possible and certainly will tell many others about your superior personnel and product.

-- R. Jack Conley

A: Fact !

DIMENSIONAL STABILITY YOU CAN RELY ON

BAMBOO PLYWOOD

Bamboo plywood is environmentally friendly, sustainably harvested, harder than Maple, mills and looks like solid wood. This Carmel or slightly golden colored Bamboo Veneer plywood is produced on a CFC core. CFC veneer core is manufactured with a Western softwood inner core. In combination with the thinnest MDF skin available on the market, CFC veneer core provides better strength and improved density. The dimensional stability ensures that the panel will always lay flat.

ITEM NO	4'x8' BAMBOO	1-3 Pcs	4-6 Pcs	7-9 Pcs	10+ Pcs	25 Pcs

***Plywood Pricing:** Prices listed are per sheet. 1 thru 10pc pricing may be obtained by mixing thicknesses and specie. 25pc pricing is for same thickness and specie. 25pc Bunk may contain up to 10% Shop Grade (a couple sheets may contain slight defects), and are special ordered.

Plywood Terminology

Veneer Matching: The natural coloration and arrangement of a veneer panel face determines the resulting visual effect. Different matching techniques are used for specific panel applications.

BOOK MATCH: Every other piece of adjacent veneer is turned over, resulting in identical, but opposing patterns.

PLEASING: Veneers are matched by color or similarity, not necessarily by grain characteristics.

RANDOM: Veneers intentionally do not match at the joints, providing a casual effect.

SLIP MATCH: Adjacent veneer sheets are joined side by side, same sides up, for a uniform grain pattern.

HICKORY PLYWOOD features the loose wavy grain common to hickory hardwood. With its two-tone like face grain and heartwood combination many hickory enthusiasts enjoy claim that hickory can provide a rustic look of elegance.

Plywood Terminology

Plywood Surface Grades

A-1, A-4...These alpha-numerical designations refer to the grade of the plywood face and back surfaces. Plywood can have faces and backs of different grades. The letter identifies the face surface grade while the number identifies the back surface grade. Face Grades range from A thru E, with A being the best. Back Grades range from 1 thru 4, with 1 being the best. Plywood with a 1 or 2 back grade will have the face and back of the same specie. Plywood with a 3 or 4 back grade can have a back surface of a different specie than the front surface.

Plywood Surface Grain Patterns

There are two ways to influence the plywood surface grain pattern -- by the types of veneer cuts, and veneer matching during the glueing process.

Veneer Cuts: Depending on the manner in which a log is cut, strikingly different visual effects can be achieved with the wood's grain and characteristics. Two logs of the same species, cut in different ways will produce distinctive veneers.

ROT (Rotary Cut): The entire log is cut or "peeled." It can yield full sheets of veneer with broad grain pattern.

PS (Plain Slicing): The flitch, with the heart side against the slicer table is cut parallel to a line through the center of the log.

RC (Rift Cut): A cut angle of 15 degrees to the radius of the flitch (half log) is used to minimize the ray flake affect in oak.

QS (Quarter Slicing): This method produces a series of stripes -- straight in some woods, varied in others. Most species have the same look as rift cut.

RED OAK PLYWOOD displays an open and abundant heartwood that varies reddish tan to brown. Its constant coloration from panel to panel makes it a good choice for a wide variety of furniture, cabinets and fixtures.

When moisture resistance is a priority...

...look into marine plywood. This type uses the best adhesives and is manufactured to the highest standards. It also is most commonly graded as A-A, with two top grade faces.

Core Quality: BS 1088 Marine plywood allows no open knots over 1/8" wide in the core. Voids must be cut out and patched resulting in a solid core with no voids.

Quality Assurance

Quality Assurance: Our European Birch Plywood is produced by a quality controlled process using a superior glue bond coupled with a multi-ply design, giving the plywood superior strength, rigidity and dimensional stability. The foreign grading system uses alpha designations to refer to the quality of the plywood (B(S), BB, CP, L, and C) with B(S) being the best. The first set of letters refers to the face. The second set refers to the back.

Pricing

Plywood Pricing: Prices listed are per sheet. 1 thru 10pc pricing may be obtained by mixing thicknesses and specie. 25pc pricing is for same thickness and specie. 25pc Bunk may contain up to 10% Shop Grade (a couple sheets may contain slight defects), and are special ordered.

- Feb 10-11, 2012
- Mar 9-10, 2012
- Apr 13-14, 2012
- May 18-19, 2012

Learn The Easy Way To Turn A Wooden Bowl

This class is designed for the turner who wants to get a better handle on bowl turning. The 3/8" Bowl Gouge will be used for 98% of the work on the bowl, starting from a "green" bowl blank. The student will learn the Pull Cut, Bevel or Push Cut, and the Shear Cut. Topics covered will include safety, wood selection, preparation of the bowl blank, mounting options, tool selection, sharpening, sanding (both power and hand), and finishing options for the final project. You will leave the class with various handouts, a nearly finished bowl.

All classes are Fri Sat Classes, are taught by Ernie Schutte, and cost \$120 including all materials.

Instructor Ernie Schutte will confirm all class dates with each participant prior to the class. Maximum class size if three. Classes may be added if enough turners sign up. Classes may be cancelled if it does not have at least two participants. Instructor is Ernie Schuette, 517-775-2166
